Advanced Synthetics Software Private Agent

Synthetic monitoring for private web applications and sites

Protect the digital experiences of your employees and partners while assuring the availability of internal digital services.

Enterprise Web applications and commercial customer or partner-facing apps running on secure intranets and extranets demand high availability and performance. The consumer Web has raised expectations for the enterprise user's experience. Now you can monitor it.

A Software Private Agent is a lightweight service that can be deployed to any Windows Server where it will reliably monitor performance and availability of internal applications. Because it uses real browsers, any interactive business application workflow can be simulated — even complex logical Web services can be monitored! Private Agents are downloaded from Dynatrace Advanced Synthetics and installed in minutes with just a few simple configurations. All performance data is securely managed, analyzed and alerted by the Dynatrace Advanced Synthetics SaaS platform.

The Dynatrace advantage:

Easy to use — deploy to physical, virtual and Cloud servers when and where needed

Affordable and flexible — delivered as a service with cost-effective consumption based licensing

True end user experience — business-relevant measurements using real browsers

Enterprise grade — secure and scalable to thousands of tests per hour

360 degree performance — real user and synthetic, from the client to backend

Automated problem detection — root-cause error analytics accelerate problem resolution

> As an an online retailer, website and mobile performance is critical to our organization because it directly correlates with the customer experience and revenue generation. That's why we rely on Dynatrace."
