

Automated Problem Remediation

Stop wasting time in war rooms and innovate more

Description

Rapid resolution can't happen manually

Manual triage and remediation of application problems is a slow, time consuming process that distracts operations and application teams from more valuable strategic and innovative activities.

Dynatrace automatically identifies common application problems by triggering predefined, repeatable remediation workflows to resolve incidents immediately.

In two weeks, Dynatrace will define automated remediation scripts, configure custom problem detection rules, and create custom workflow integration. Resolve problems faster with Dynatrace's Automated Problem Remediation.

Deliverables

An Expert Architect will work with you to embed Dynatrace into your self-healing fabric. At the end of the two weeks, we will deliver an Engagement Summary and ensure that you are setup with:

- Application and incident management process review
- Defined remediation scripts
- Configured custom problem detection rules and workflow integration

Root cause

AI-driven root cause analysis resolves problems in minutes, not hours

Eliminate war rooms

Knock out manual efforts to triage and resolve problems

User experience

Remediate issues faster to avoid negative impact to users

Your Dynatrace experts

Expert Architect

Our Architects have years of experience and the skills necessary to lead complex enterprise projects. This leadership results in the improved adoption of Dynatrace as well as significantly mitigating the risk inherent in enterprise deployments.

Dynatrace Services Team

The global reach of Dynatrace Services means that you not only have access to your consultant, but hundreds of additional resources worldwide to help drive value from your deployment. Powered by Collective Intelligence, by tapping into this network, you can find answers quicker and drive more value from Dynatrace.
