Software intelligence for the enterprise cloud

dynatrace

Simply smarter, all-in-one platform powered by AI

- Application performance management
- Cloud infrastructure monitoring
- AIOps
- Digital experience management
- Digital Business Analytics

What makes Dynatrace unique

Fully automated

With zero-touch configuration, continuous discovery and mapping, you'll have more time to do something useful.

Full stack

We understand all the relationships and interdependencies, top to bottom, so you don't have to.

AI-powered

Powerful AI, providing real-time precise answers. Minimize troubleshooting, and spend more time knowing.

Broadest technology support

Engineered for cloud native and hybrid environments, Dynatrace covers your complete ecosystem automatically—from microservices to traditional applications.
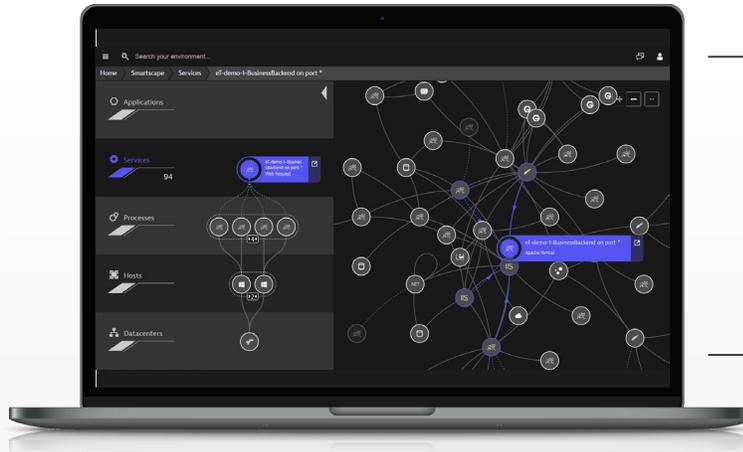

Software Intelligence for Microsoft Azure

Microsoft Azure
Certified

All-in-one, AI-powered monitoring of Azure applications and infrastructure

Automatically discover all containers running on Azure with a real-time view of all the connections between your containerized processes, hosts, and cloud instances

Easily trace transactions across multi-cloud instances.

Real-time auto discovery and OneAgent injection of Docker and AKS containers without code or image changes.

Leverage Dynatrace OneAgent to deploy the OneAgent onto Kubernetes nodes automatically.

Azure Solution advantages

Monitor applications, clusters, and underlying cloud infrastructure health in Azure environments, in conjunction with and in context to your broader on-premises and hybrid cloud environments.

- Dynatrace OneAgent automates deployment, configuration, and updates to remove all manual effort

- Single view across your entire Azure environment and extended hybrid, multi-cloud ecosystem

- AI-powered problem identification and root cause analytics, including container-based applications

- Scales across 100's or 1,000's of nodes and apps with ease

"BARBRI moved our entire production environment into Azure, and Dynatrace gave me and my team the confidence to do that in an efficient and effective way."

—Mark Kaplan, Director IT, BARBRI

barbri

Out of the box, Dynatrace provides
fully automated capabilities:

- Monitoring of user experience, applications, Azure components, and hosts

- AI-powered problem detection and root-cause analysis

- Dependency discovery and topology mapping

- Distributed tracing of microservices
